

### **FEATURES**

- ► Industrial Standard DIP-24 Package
- ► Wide 2:1 Input Voltage Range
- ► Fully Regulated Output Voltage
- ► I/O Isolation 1500 VDC
- ▶ Operating Ambient Temp. Range -40°C to +85°C
- ► Low No Load Power Consumption
- ► No Min. Load Requirement
- ► Under-Voltage, Overload and Short Circuit Protection
- ► Remote On/Off Control
- ► Shielded Metal Case with Insulated Baseplate
- ► UL/cUL/IEC/EN 62368-1(60950-1) Safety Approval

### PRODUCT OVERVIEW

The MINMAX MIW10 series is a range of cost-optimized 10W isolated DC-DC converter within an encapsulated DIP-24 package. There are 21 models available for 12, 24, 48VDC with wide 2:1 input voltage range. By state-of-the-art circuit topology and 89% high efficiency could be achieved allowing an operating temperature of -40°C to +85°C as well as low standby power consumption. Further features include remote ON/OFF, under-voltage, overload, short circuit protection and no min. load requirement as well. These DC-DC converters offer a better solution for critical space applications to reduce PCB layout demand area like battery-powered equipment, instrumentation, distributed power architectures in communication, industrial electronics, energy facilities and others.

Model Selection	Guide						
Model	Input	Output	Output	Inp	out	Max. capacitive	Efficiency

Operating Ambient Temperature Range (See Power Derating Curve)	-40	+85	°C		
Case Temperature		+105	°C		
Storage Temperature Range	-50	+125	°C		
Humidity (non condensing)		95	% rel. H		
Lead Temperature (1.5mm from case for 10Sec.)		260	°C		

#### **Notes**

- 1 Specifications typical at Ta=+25°C, resistive load, nominal input voltage and rated output current unless otherwise noted.
- 2 Transient recovery time is measured to within 1% error band for a step change in output load of 75% to 100%.
- 3 We recommend to protect the converter by a fast blow fuse in the input supply line.
- 4 Other input and output voltages may be available, please contact MINMAX.
- 5 The external components might be required to meet EMI/EMS standard for some of test items. Please contact MINMAX for the solution in detail.
- 6 Specifications are subject to change without notice.
- 7 The repeated high voltage isolation testing of the converter can degrade isolation capability, to a lesser or greater degree depending on materials, construction, environment and reflow solder process. Any material is susceptible to eventual chemical degradation when subject to very high applied voltages thus implying that the number of tests should be strictly limited. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage. Furthermore, the high voltage isolation capability after reflow solder process should be evaluated as it is applied on system.

## **Physical Characteristics**

Case Size : 31.8x20.3x10.2mm (1.25x0.80x0.40 inches)

Case Material : Metal with Non-Conductive Baseplate

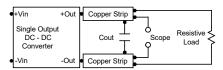

Pin Material : Copper Alloy
Weight : 17.3g

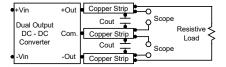

#### **Test Setup**

#### Peak-to-Peak Output Noise Measurement Test

Use a Cout  $0.47\mu F$  ceramic capacitor. Scope measurement should be made by using a BNC socket, measurement bandwidth is 0-20 MHz. Position the load between 50 mm and 75 mm from the DC-DC Converter.

#### **Technical Notes**

#### Remote On/Off

Positive logic remote on/off turns the module on during a logic high voltage on the remote on/off pin, and off during a logic low. To turn the power module on and off, the user must supply a switch to control the voltage between the on/off terminal and the -Vin terminal. The switch can be an open collector or equivalent. A logic low is 0V to 1.2V. A logic high is 3.5V to 12V. The maximum sink current at the on/off terminal (Pin 1) during a logic low is -100µA.

#### Overload Protection

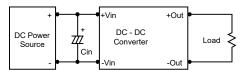

To provide protection in a fault (output overload) condition, the unit is equipped with internal current limiting circuitry and can endure current limiting for an unlimited duration. At the point of current-limit inception, the unit shifts from voltage control to current control. The unit operates normally once the output current is brought back into its specified range.

#### Overvoltage Protection

The output overvoltage clamp consists of control circuitry, which is independent of the primary regulation loop, that monitors the voltage on the output terminals. The control loop of the clamp has a higher voltage set point than the primary loop. This provides a redundant voltage control that reduces the risk of output overvoltage.

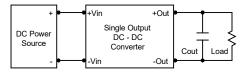

#### Input Source Impedance

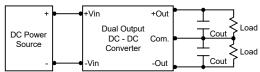

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module. In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup. By using a good quality low Equivalent Series Resistance (ESR <  $1.0\Omega$  at 100 kHz) capacitor of a  $12\mu\text{F}$  for the 12V,  $4.7\mu\text{F}$  for the 24V input devices and a  $2.2\mu\text{F}$  for the 48V devices, capacitor mounted close to the power module helps ensure stability of the unit.

#### Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance. To reduce output ripple, it is recommended to use 3.3µF capacitors at the output.

#### Maximum Capacitive Load

The MIW10 series has limitation of maximum connected capacitance on the output. The power module may operate in current limiting mode during start-up, affecting the ramp-up and the startup time. The maximum capacitance can be found in the data sheet.

#### Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 105°C.

The derating curves are determined from measurements obtained in a test setup.
