

FEATURES

- ► Industrial SMD Package
- ► Ultra-wide 4:1 Input Voltage Range
- ► Fully Regulated Output Voltage
- ► I/O Isolation 1500 VDC
- ▶ Operating Ambient Temp. Range -40°C to +80°C
- ► Under-voltage, Overload and Short Circuit Protection
- ► Remote On/Off Control
- ► Cleaning-washable Process Available(option)
- ➤ Qualified for Lead-free Reflow Solder Process According to IPC/JEDEC J-STD-020D.1
- ► Tape & Reel Package Available
- ► UL/cUL/IEC/EN 62368-1(60950-1) Safety Approval

PRODUCT OVERVIEW

The MINMAX MSGWI06 series is a range of isolated 6W DC-DC converter modules featuring fully regulated output voltages and ultra-wide 4:1 input voltage ranges. These products are with a very small footprint occupying just 4.5cm² (0.7 square in.) on PCB. All models are qualified for lead free reflow solder processes according IPC J-STD-020D.1. An excellent efficiency allows an operating temperature range of –40°C to +80°C. Further features include remote On/Off control, under-voltage, over load and short circuit protection.

The very compact dimensions of these DC-DC converters make them an ideal solution for many space critical applications in battery-powered equipment and instrumentation.

Model	Input	Output	ıt Output		Input		Max. capacitive	Efficiency
Number	Voltage	Voltage		Current		Current		(typ.)
	(Range)		Max.	Min.	@Max. Load	@No Load	1	@Max. Load
	VDC	VDC	mA	mA	mA(typ.)	mA(typ.)	μF	%
MSGWI06-24S033		3.3	1450	218	262			76
MSGWI06-24S05		5	1200	180	316		330	79
MSGWI06-24S12		12	500	75	301		100	83

For each output

Input Specifications					
Parameter	Model	Min.	Тур.	Max.	Unit
Input Surge Voltage (1 sec. max.)	24V Input Models	-0.7		50	
	48V Input Models	-0.7		100	
Start-Up Threshold Voltage	24V Input Models			9	VDC
	48V Input Models			18	
Lindan Valtaria Chistalassia	24V Input Models			8.5	
Under Voltage Shutdown	48V Input Models			17	
Short Circuit Input Power				3000	mW
Input Filter	All Models		Internal Pi Type		
Conducted EMI			Compliance to EN 55022, class A		

Remote On/Off Control					
Parameter	Conditions	Min.	Тур.	Max.	Unit
Converter On	2.5V ~ 50VDC or Open Circuit				
Converter Off	-0.7V ~ 0.8V				
Control Input Current (on)	Vin-RC=5V			500	μA
Control Input Current (off)	Vin-RC=0V			-500	μA
Control Common	Referenced to Negative Input				
Standby Input Current				10	mA

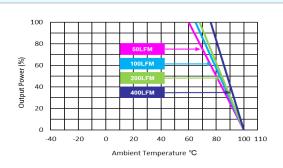

Output Specifications					
Parameter	Conditions	Min.	Тур.	Max.	Unit
Output Voltage Setting Accuracy			±1.0	±2.0	%Vnom.
Output Voltage Balance	Dual Output, Balanced Loads		±1.0		%
Line Regulation	Vin=Min. to Max. @Full Load		±0.5	±1.0	%
Load Regulation	lo=15% to 100%		±0.5	±1.2	%
Ripple & Noise	0-20 MHz Bandwidth			100	mV _{P-P}
Transient Recovery Time	250/ Land Chan Channe		300	600	μsec
Transient Response Deviation	25% Load Step Change		±3		%
Temperature Coefficient			±0.01	±0.02	%/°C
Over Load Protection	Foldback	110	150		%
Short Circuit Protection	Continuous, Automatic Recovery				

General Specifications					
Parameter	Conditions	Min.	Тур.	Max.	Unit
I/O Isolation Voltage	60 Seconds	1500			VDC
	1 Second	1800			VDC
I/O Isolation Resistance	500 VDC	1000			MΩ
I/O Isolation Capacitance	100kHz, 1V		1200	1500	pF
Switching Frequency			330		kHz
MTBF (calculated)	MIL-HDBK-217F@25°C, Ground Benign 350,000			Hours	
Moisture Sensitivity Level (MSL)	IPC/JEDEC J-STD-020D.1	C/JEDEC J-STD-020D.1 Level 2			
Safety Approvals	UL/cUL 62368-1 recognition(UL certificate), IEC/EN 62368-1 & 60950-1(CB-report)				

Environmental Specifications			
Parameter	Min.	Max.	Unit
Operating Ambient Temperature Range (See Power Derating Curve)	-40	+80	°C
Case Temperature		+105	°C
Storage Temperature Range	-50	+125	°C
Humidity (non condensing)		95	% rel. H
Lead-free Reflow Solder Process	IPC/	IPC/JEDEC J-STD-020D.1

Notes

- 1 Specifications typical at Ta=+25°C, resistive load, nominal input voltage and rated output current unless otherwise noted.
- 2 Transient recovery time is measured to within 1% error band for a step change in output load of 75% to 100%.
- 3 These power converters require a minimum output loading to maintain specified regulation, operation under no-load conditions will not damage these modules; however, they may not meet all specifications listed.
- 4 We recommend to protect the converter by a slow blow fuse in the input supply line.
- 5 Other input and output voltage may be available, please contact MINMAX.
- 6 Specifications are subject to change without notice.
- The repeated high voltage isolation testing of the converter can degrade isolation capability, to a lesser or greater degree depending on materials, construction, environment and reflow solder process. Any material is susceptible to eventual chemical degradation when subject to very high applied voltages thus implying that the number of tests should be strictly limited. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage. Furthermore, the high voltage isolation capability after reflow solder process should be evaluated as it is applied on system.

Test Setup

Peak-to-Peak Output Noise Measurement Test

Use a Cout $0.47 \mu F$ ceramic capacitor. Scope measurement should be made by using a BNC socket, measurement bandwidth is 0-20 MHz. Position the load between 50 mm and 75 mm from the DC-DC Converter.

Technical Notes

Remote On/Off

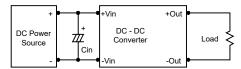

Positive logic remote on/off turns the module on during a logic high voltage on the remote on/off pin, and off during a logic low. To turn the power module on and off, the user must supply a switch to control the voltage between the on/off terminal and the -Vin terminal. The switch can be an open collector or equivalent. A logic low is -0.7V to 0.8V. A logic high is 2.5V to 50V. The maximum sink current of the switch at on/off terminal during a logic low is -500µA. The maximum sink current of the switch at on/off terminal during a logic high is 500µA or open.

Overcurrent Protection

To provide protection in a fault (output overload) condition, the unit is equipped with internal current limiting circuitry and can endure current limiting for an unlimited duration. At the point of current-limit inception, the unit shifts from voltage control to current control. The unit operates normally once the output current is brought back into its specified range.

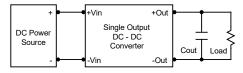

Input Source Impedance

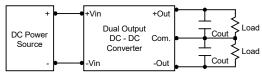

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module. In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup. Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance (ESR < 1.0Ω at 100 kHz) capacitor of a $4.7\mu\text{F}$ for the 24V input devices and a $2.2\mu\text{F}$ for the 48V devices.

Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance. To reduce output ripple, it is recommended to use 3.3μ F capacitors at the output.

Maximum Capacitive Load

The MSGWI06 series has limitation of maximum connected capacitance at the output. The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time. The maximum capacitance can be found in the data sheet.

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 105°C. The derating curves are determined from measurements obtained in a test setup.
